Durosil L

C-Silicone Impression Material Type I

**Preliminary impression material with silicone base
precision for supplementary impressions**

- + Supple, non-stick material
- + Very high compressive strength and recovery from deformation
- + Polysiloxane condensation curing preliminary impression material with high final hardness
- + Simplified initial mixing through optimized fillers
- + Silicate compound %63,30
- + Suitable for the double-mix technique
- + Super detail reproduction
- + Excellent characteristics
- + Excellent dimensional accuracy and detail
- + Easy to use and natural taste
- + Hydrophilic surface characteristics resulting in low waste
- + Hydroxy-polydimethylsiloxane %28,40
- + Mint flavor

Durosil S

C-Silicone Impression Material Type II

Low viscosity C-silicone ideal for two-stage technique, single-stage technique with two viscosities. Preliminary impression material with silicone base precision for supplementary impressions

- + Very high compressive strength and recovery from deformation
- + DUROSIL S consistency and high hydrocompatibility guarantee a perfect reproduction of fine details in every clinical condition
- + Flowable consistency perfect flowability in the gingival sulcus.
- + Easy to use and natural taste
- + Hydrophilic surface characteristics resulting in low waste
- + Silicate compound 48,90 %
- + Mint flavor 0,11 %
- + Hydroxy-polydimethylsiloxane 13,6 %

Paste Hardener

Catalyst For C-Silikone Impression Materials

- + Excellent flow characteristics
- + No negative side effects
- + Mucosal movements can be taken precisely
- + Paste hardener for silicone
- + Easy to mix due to outstanding wettability
